

You'll Have A Blast With Our Stainless Steel Bottle Washer

Here are a few reasons why you will fall in love with our new S/S bottle washer.

- 1** The stainless steel construction will last a long time. It's much sturdier than other models.
- 2** No more damage, no more racket. The automatic soft closing valve keeps you from banging on the pipes.
- 3** The long stem makes it easy to clean carboys and pretty much any type of bottle.
- 4** Easily attaches to almost any faucet. The threading is the same as a garden hose. So it can be used on most outside taps and laundry rooms. We also have a kitchen sink adaptor.
- 5** The strong stream makes it great for rinsing out soaps and cleaners and soiled deposits.
- 6** You can control the spray (and the mess). There is a lever for triggering the blast of water by pushing down on the lip of the bottle or the jug.
