

The Bottle Tower

Thank you for purchasing The Rotational Bottle Tower.

Please ensure that you have received all the items listed below:

- Base with plug.
- 5 inserts, that will allow you to hold up to 45 bottles.

Features:

- The base is designed so you can either connect a hose to drain any liquid directly to a sink (or bucket) or to plug (included) the hole on the basin. Required hose is 3/8" standard in the industry.
- The base has two trays to collect the liquid drained from the bottles and Carboys.
- On the top insert you can dry our PET carboys or our FerMonsters.
- You can also insert our Monster Cleaner on the top insert (Monster Cleaner not included with The Bottle Tower)
- The inserts are designed to be easily assembled and unassembled.
- Inserts rotate for convenience while base remains stationary facilitating the process of placing (and taking out) the bottles.

Care of the product:

- After each use, rinse with water and dry it.
- Store in the box in a dry place. Never store under direct exposure to the sun.

Additional inserts are available for you to build your Bottle Tower if you want to hold more bottles. We do not recommend holding more than 90 bottles per base.

We do not recommend drying the Glass Carboys on top of the Tower.
